SUMMARY

Full Stack Engineer with over 6 years of experience building scalable web applications, design systems, and AI-powered automation workflows across fintech and software products. Proficient in React, TypeScript, Python, and Django, AI, with a strong background bridging UI design, frontend engineering, and backend development.

PROFESSIONAL EXPERIENCE

Senior Full Stack Engineer Jun 2021 – Present

Carta • Remote

- Architected and deployed an LLM-powered email routing agent processing thousands of daily inbound communications, analyzing email content, attachments, and firm context to achieve an 80% automated routing rate without human intervention.
- Owned the end-to-end delivery of an expense-payment feature for venture capital funds; spanning product design collaboration, frontend implementation (React, TypeScript, internal design system), backend architecture (Django, MySQL), and an automated text-extraction tool that analyzes payment data to recommend intercompany allocations, directly closing a strategic enterprise contract.
- Developed and scaled the company-wide design system, migrating legacy stylesheets to styled-components and authoring automated codemods to seamlessly update deprecated UI components across the codebase.
- Led a cross-functional responsiveness and accessibility initiative, partnering with product designers and engineers to modernize data tables and enhance mobile usability.

UX Designer Dec 2020 – Apr 2021

TheLivery • Brazil

- Hired as the company's inaugural designer to overhaul the core mobile app and website, replacing engineer-led interfaces with modern, accessible Figma designs that eliminated negative App Store UI feedback.

Full Stack Engineer Mar 2020 – Dec 2020

TheLivery • Brazil

- Migrated a production mobile application across major Ionic framework iterations (Ionic 3 through 5) to boost performance and maintainability.
- Built a marketplace application connecting restaurants with delivery fleets from ideation to MVP release, developing the backend REST APIs and frontend (Angular/Ionic).
- Developed an automated desktop application (Electron) integrating real-time WebSockets to capture restaurant orders and trigger automatic ticket printing.

Frontend Engineer Jul 2020 – Jun 2021

Privoce • Brazil

- Collaborated directly with the founder and an international team to design, debate tradeoffs, and ship open-source web privacy tools, ad-block extensions, and a real-time co-browsing platform using React and TypeScript.
- Designed and launched the company's core marketing landing page in React.

EDUCATION

Bachelor of Science in Computer Science (GPA 3.7) • Universidade Estadual do Sudoeste da Bahia, Brazil
